JC4387

epidermal growth factor receptor homolog precursor -:
epidermal growth factor receptor homolog precursor -:
N;Alternate names: ErbB3 protein; HER3 protein
C;Species: Rattus norvegicus (Norway rat)
C;Date: 17-Jan-1996 #sequence_revision 19-Apr-1996 #t.
C;Accession: JC4387
R;Hellyer, N.J.; Kim, H.H.; Greaves, C.H.; Sierke, S.1
Gene 165, 279-284, 1995
A;Title: Cloning of the rat ErbB3 cDNA and characteri.
A;Reference number: JC4387; MUID:96096535; PMID:85221:

A;Rote: in Genbank entry CHKERBBF, release 109.0, the source is designated as G
C;Comment: This protein is synthesized as a gag-env-erbB protein.
C;Genetics:
A;Gene: gag-env-erbB
C;Superfamily: epidermal growth factor receptor; protein kinase homology
C;Keywords: ATP; oncogene; phosphotransferase; transforming protein; tyrosine-s
F;1-6/Product: gag protein (fragment) #status predicted <GAG-
F;7-59/Product: env protein (fragment) #status predicted <GNV-
F;00-698/Product: protein-tyrosine kinase erbB #status predicted <ERB-
F;194-459/Domain: protein kinase homology <KIN-
F;202-210/Region: protein kinase ATP-binding motif
F;229/Active site: Lys #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          R.Nilsen, T.W.; Maroney, P.A.; Goodwin, R.G.; Rottman, F.M.; Cell 41, 719-726, 1985

                                                                                                                                                                                                                                                                                                                                                                                                                                                      expressed in ovarian cancers.

MISCELLANEOUS: Binding of EGF to the receptor leads to dimerization, internalization of the EGF-receptor complex, induction of the tyrosine kinase activity, stimulation of synthesis, and cell proliferation.

SIMILARITY: BELONGS TO THE EGF RECEPTOR FAMILY.
                                                                                                                                                                                                                                                                                                                                          s SWISS-PROT entry is copyright.
